

System Constraints

1. All Paths must be traversable under normal conditions. (Construction not included)
2. All Paths must use public spaces and not direct people to walk through classrooms or office spaces which may contain uninterruptible events.
3. Users who have identified themselves as disabled must not be directed to stairwells.
4. The User should always be provided with feedback of actions or button clicks. The system should never hang without some form of notification or progress meter.
5. The System should detect slow network connections and transmit lower quality content in order to reduce transmission lag.
