#### **Document Name:**

Requirements Technical Review

## **Defects, Risk Areas, and Concerns**

No.	Severity	Location	Description	
1	Major	Requirements	From a Developer/Tester viewpoint, how will the group verify the requirements? These requirements lack tests.	
2	Major	Requirements	From a Developer/Tester viewpoint, what will be the basic flow of these requirements? What will be the exceptions? It would be nice to see Use Cases for these requirements.	
3	Moderate	Requirements	From a Client viewpoint, how does the user interact with the system? It would be nice to see a Use Case Diagram showing such interactions.	
4	Moderate	Project Glossary	From a new Developer/Tester viewpoint, the glossary seems to lack key definitions needed to get started (ex: What is the definition of metadata? What is FFT/reverse FFT? What is correlation?)	
5	Minor	Storyboard	From a Developer/Tester viewpoint, the storyboard lacks flow. How will each user input/click interact with the user interface? It might be good to add in more screenshots and make a flow diagram for more visual interaction state changes.
